

GTFS for Transit Planning

What is GTFS?

- Transit agencies can be producers of “Big Data”
- General Transit Feed Specification (GTFS)
- Universal language for documenting transit data
- Set of text files with specified sets of attributes

```

What is in a GTFS Data Set?

- Required

- Agency/Feed Info
- Stops/Stop Times
- Routes
- Trips
- Calendar/Dates

- Optional

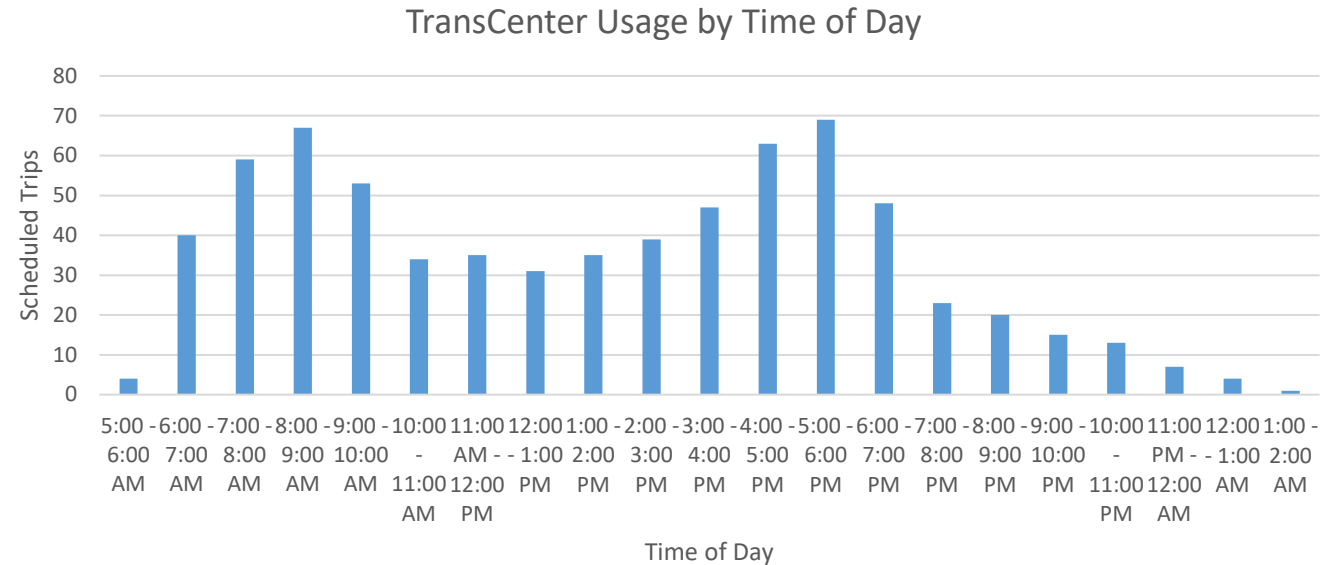

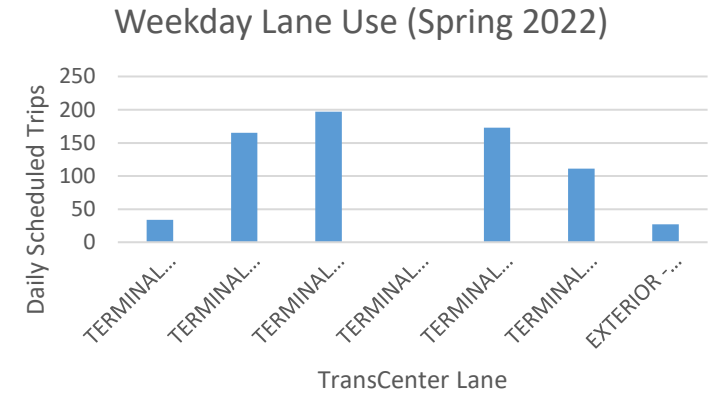

- Fare Attributes/Rules
- Shapes
- Frequencies
- Transfers
- Others...

Working with GTFS Data

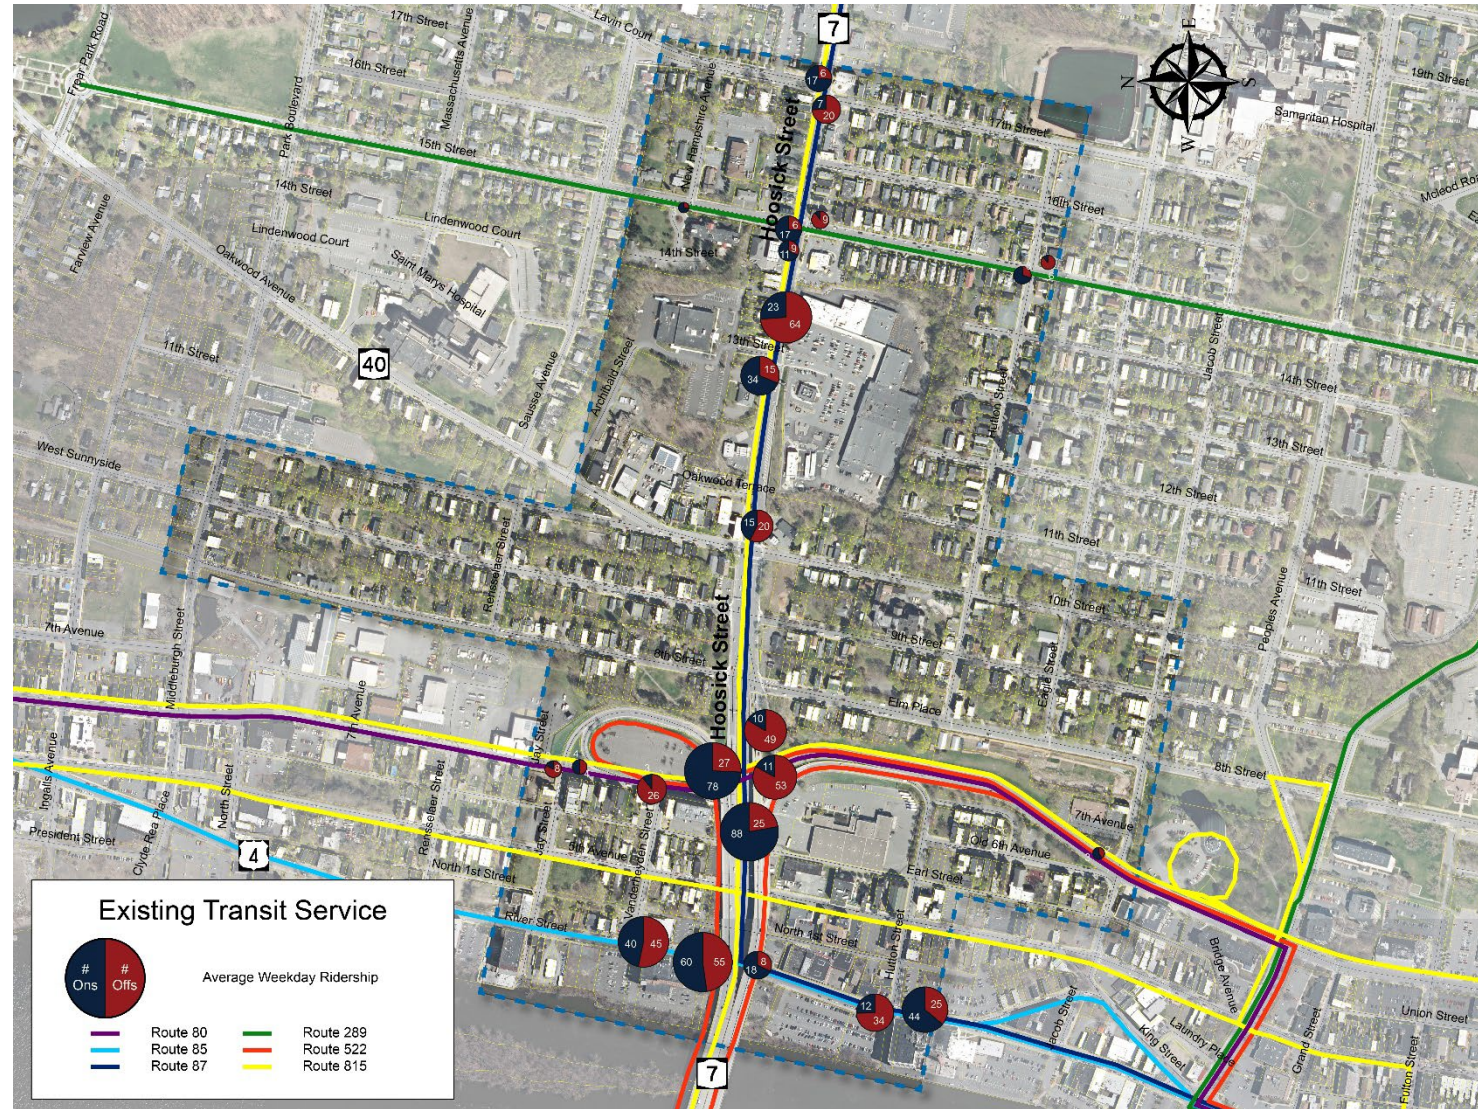

- Sources of GTFS data:
 - <https://511ny.org/developers/resources>
 - Agency generated
- Bring .txt file into Spreadsheet or GIS
- Join additional data sets
 - Ridership
 - Travel times
 - Land use
- Map/Analyze

	A	B	C	D	E	F

13	1083105	11:00:00 AM	11:00:00 AM	4991	WHITE PL	1

GTFS Applications

- Integration with developer API
 - Trip planners
- Integration with GIS
 - Route Alignments
 - Stop Locations
 - Ridership by Stop/Route
 - Segment Run Times
 - Frequent Service Corridors

Use of GTFS for Transit Reliability

Minutes Matter: A Bus Transit Service Reliability Guidebook

To view the report, visit:

<https://www.nap.edu/read/25727/chapter/1>

To download, visit:

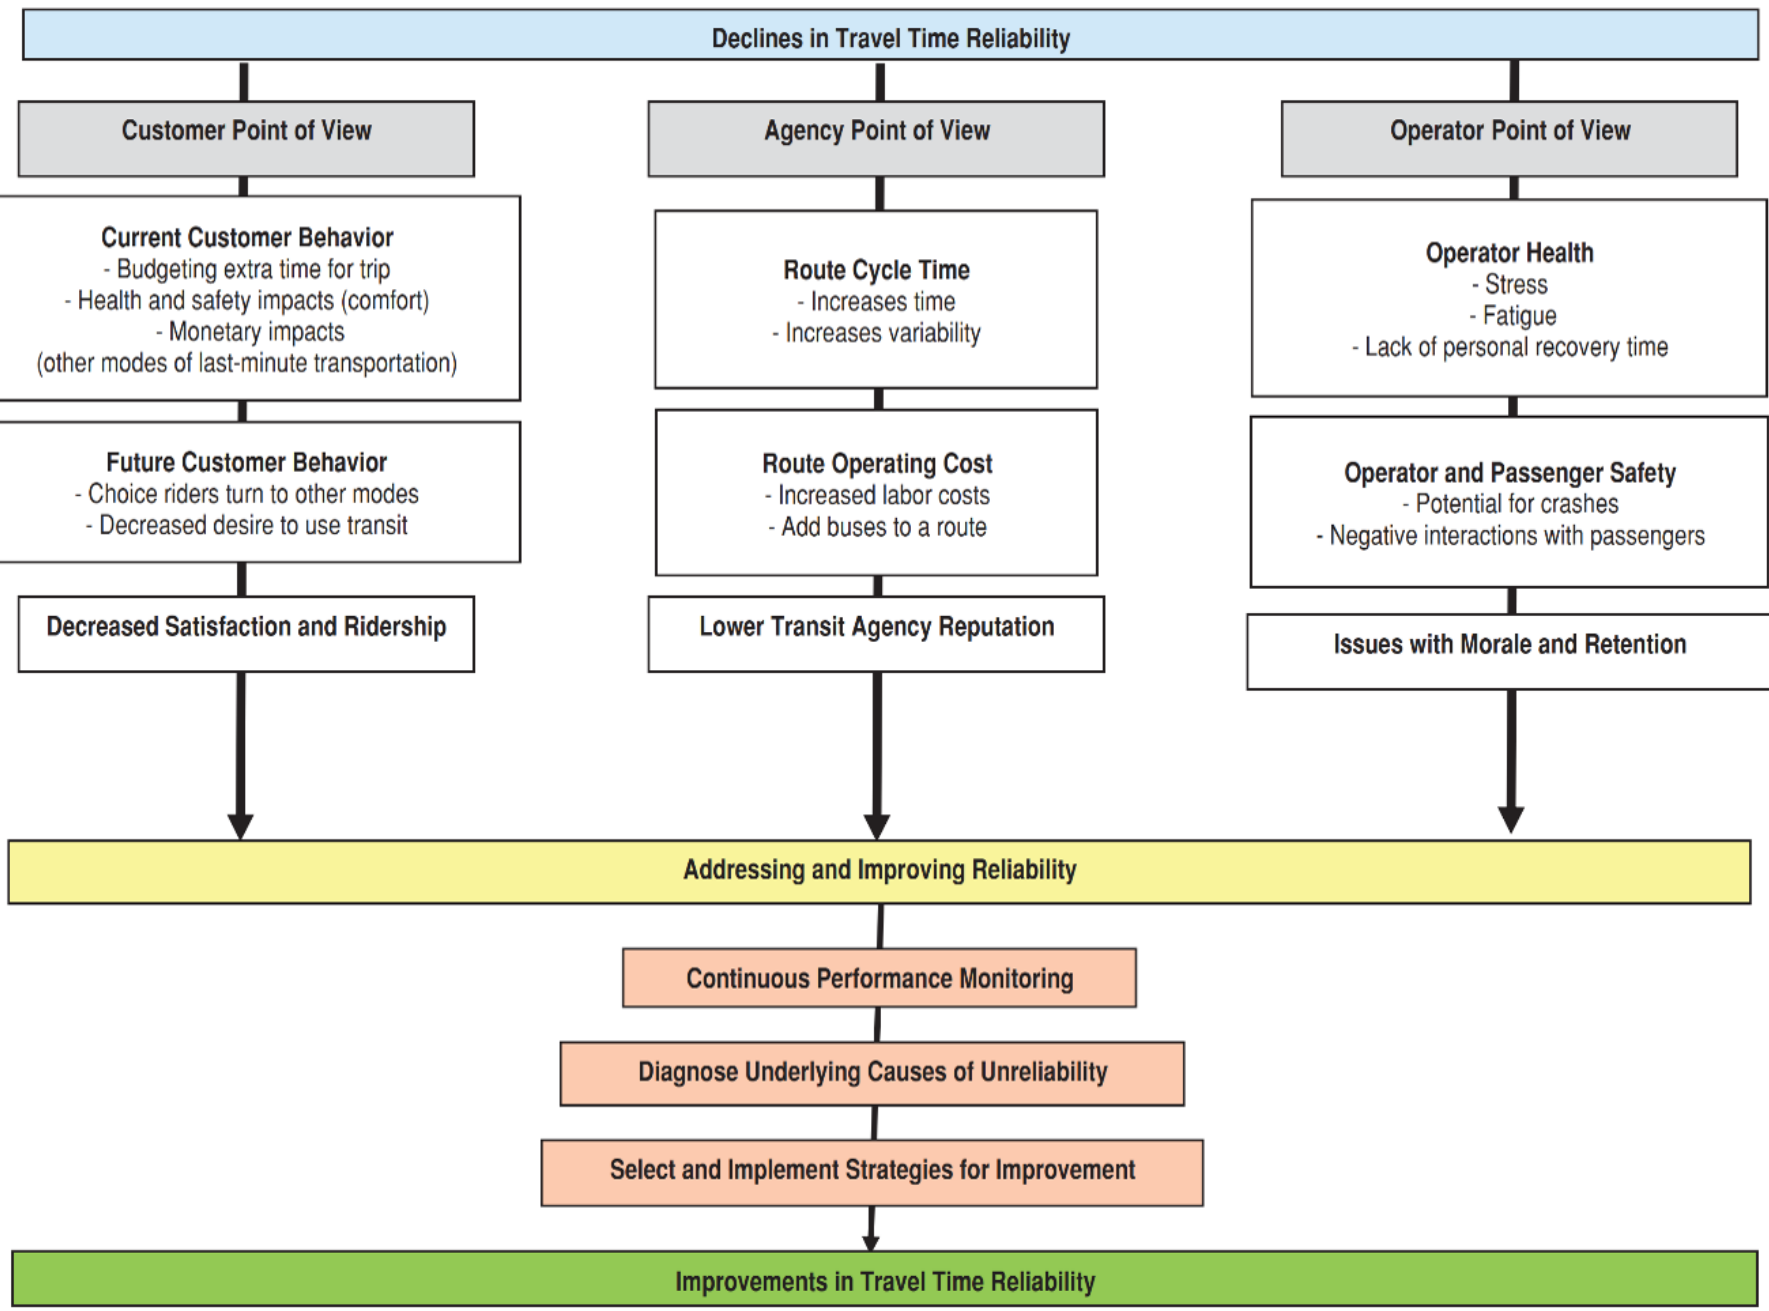

<http://www.nap.edu/download/25727>

Why is Reliability Important: Travel Time Budget

- If a trip normally takes 20 minutes, but takes 30 minutes once a week — a very typical situation for bus riders — then the customer must budget 30 minutes
- By reducing trip length variability, an agency can save customers time, without speeding up buses!

Guidebook: Selecting Measurements, Standards, and Monitoring Data

- Comprehensive list of measures
- The metrics selected must inform standards or targets to measure goals being accomplished

Aspect of Reliability	Data Needed	Reliability Measure
Punctuality	Arrival and departure times	On-time performance/schedule adherence
Variability	Trip start and end times	Running time
	Dwell time at stops	Dwell time
	Customer travel times	Travel time
		Buffer time indices
	Time between buses	Headways
Customer wait times	Wait times	
Non-operation	Records of missed service	Pullouts missed
		Missed hours of service
		Scheduled trips cancelled
	Counts of service disruptions	Number of crashes
Mean distance between failures		
Multiple	Customer surveys	Passenger ratings of reliability

Guidebook: Reliability Treatment Menus

Physical

- Encourage roadway agencies to incorporate bus-supportive features
- Far-side stop placement
- Dedicated transitways
- Queue jump lanes
- Level boarding and low-floor buses
- Right-sized terminals and layovers
- Curb extensions at bus stops
- Articulated buses

BRT Stop Consolidation Case Study

Study Goals:

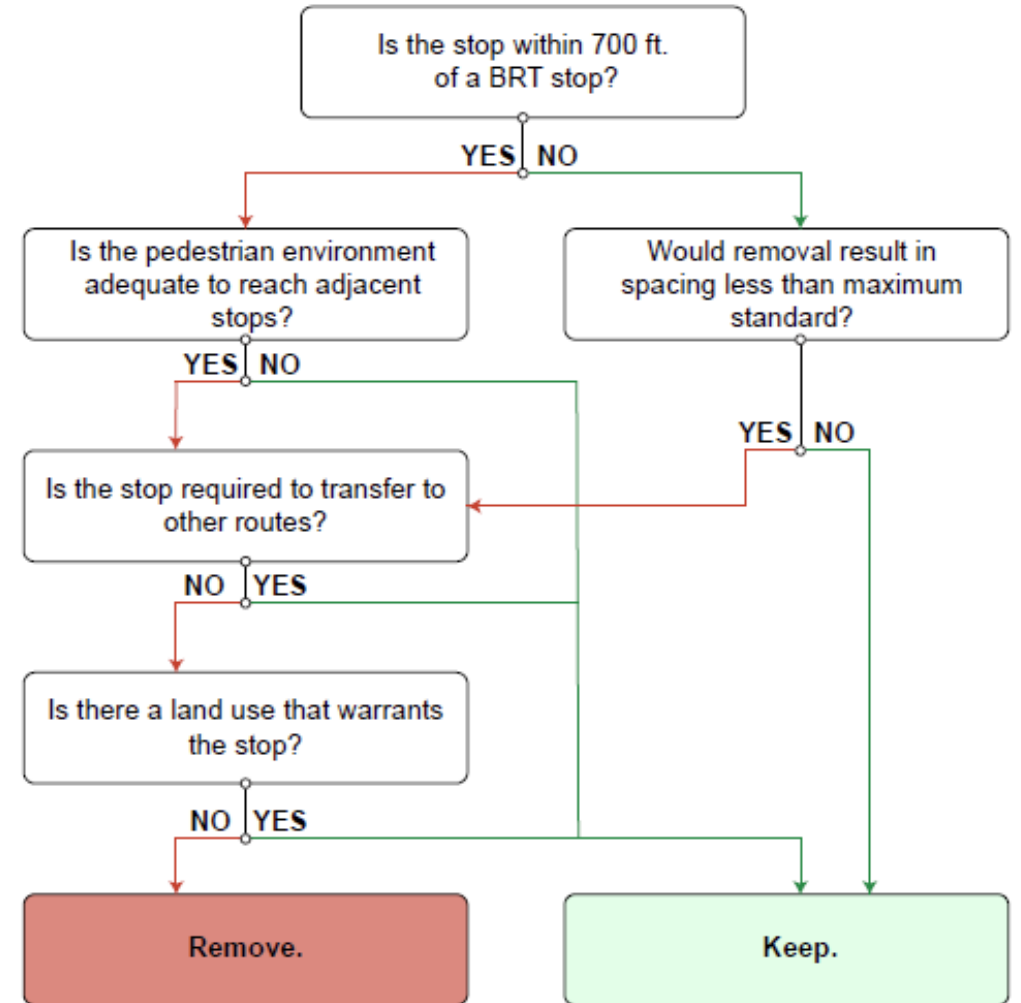

- Identify factors that suppress BRT ridership
- Assess stop locations in BRT corridors
- Improve efficiency in BRT corridors
- Encourage use of new BRT service

Bus Stop Spacing Standards

Stop removal standards based on:

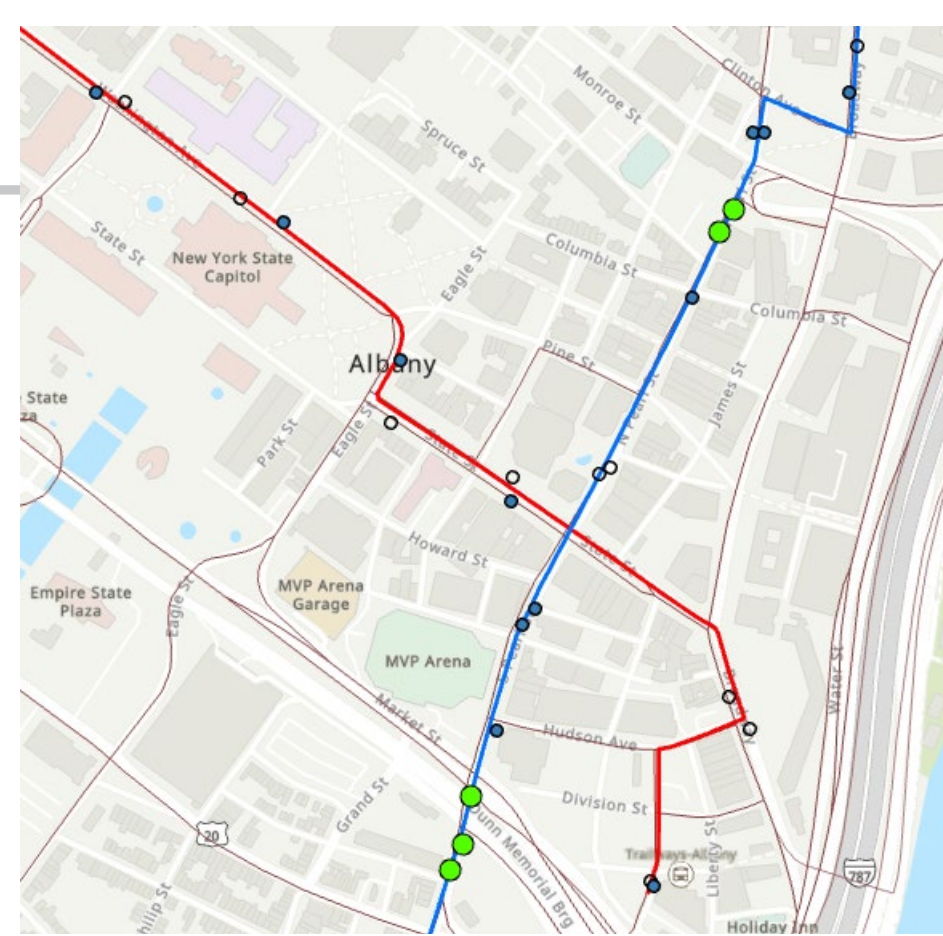

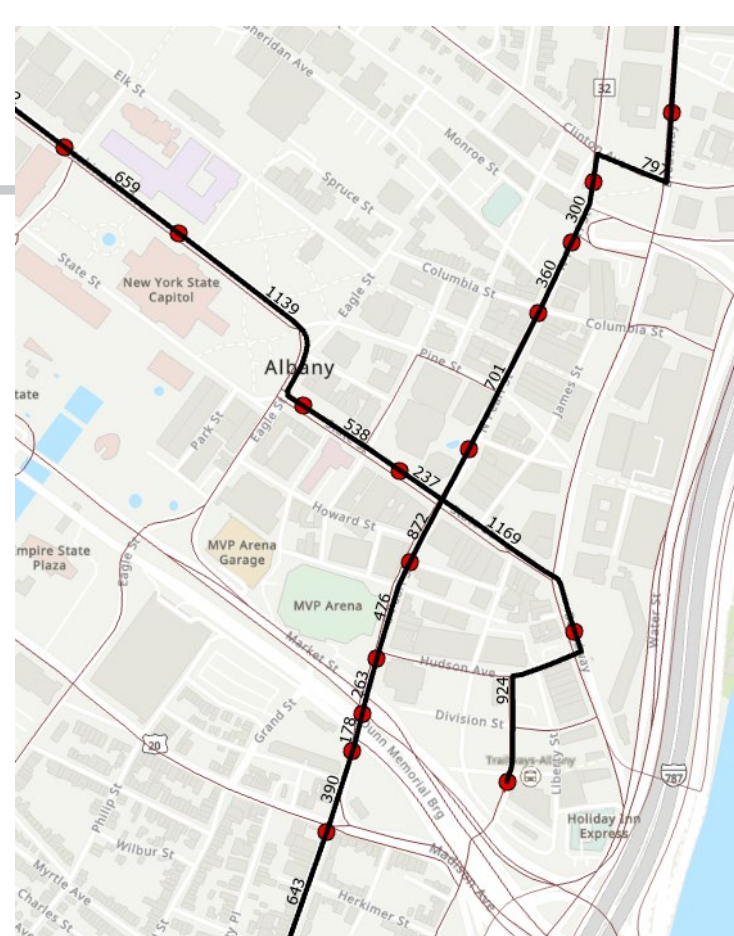

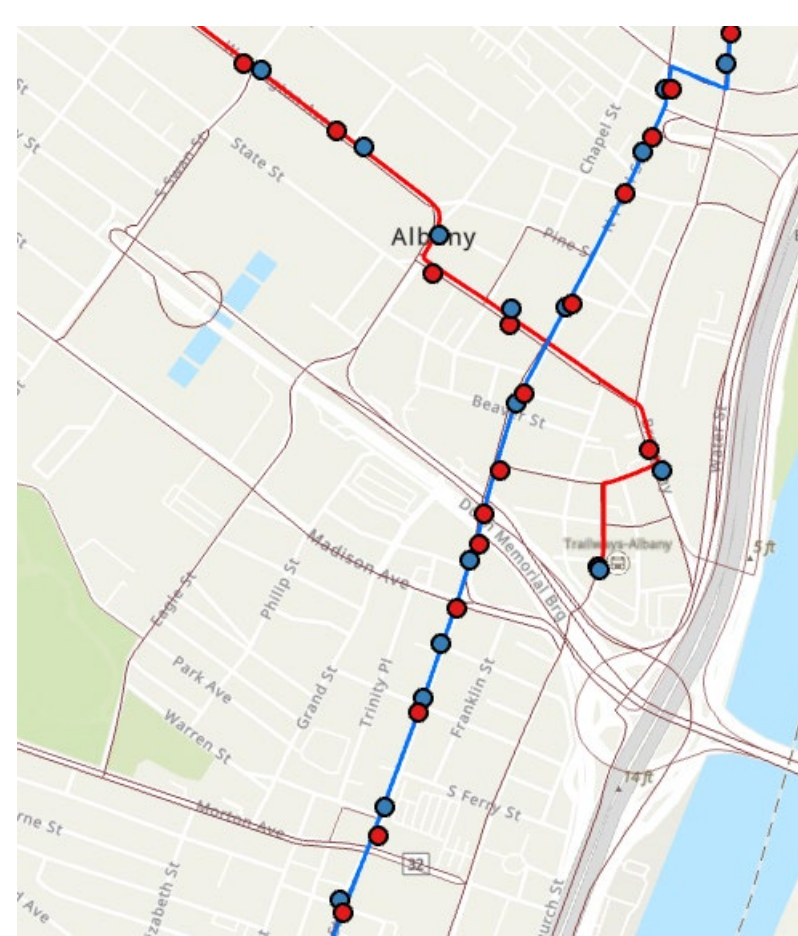

- Transit development plan/existing stop spacing standards
- Sidewalk network/ability to walk to/from nearest stop
- Transit network/ability to transfer
- Transit dependent land uses
- Ridership?

Existing Conditions – Desktop Evaluation

- GTFS data for all stops
- Filter to stops along BRT corridors
 - By Route? – Join Route Data
 - By Location?
- Identify travel direction
 - GTFS Data?
 - Ridership Data?
- Calculate distance
 - Move stops to line first!

Identify Route
Direction

Calculate Stop
Spacing

Identify Stops
Below Standards

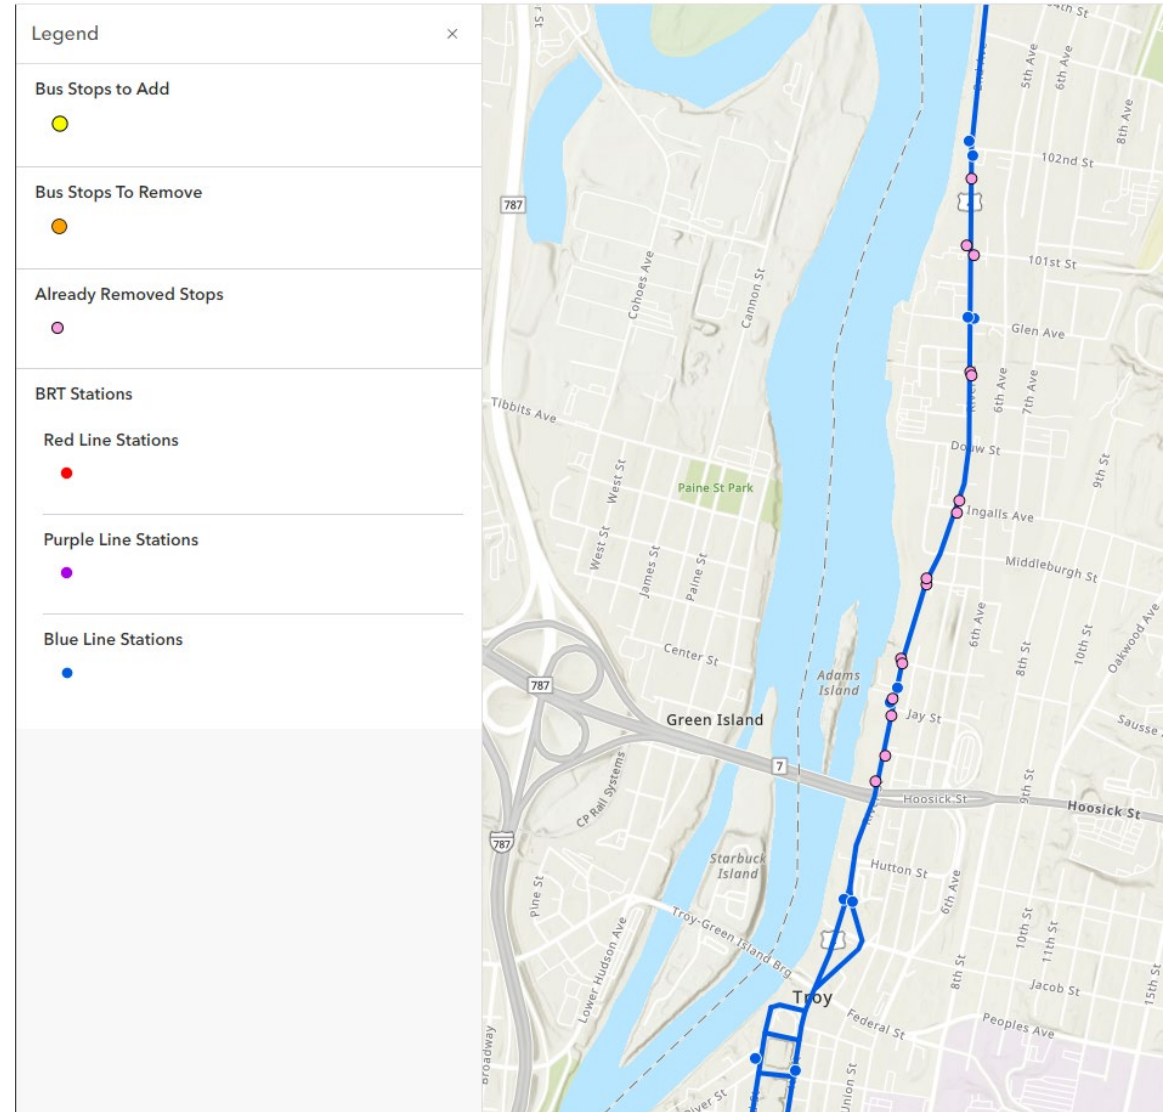

Existing Conditions - Field Visit

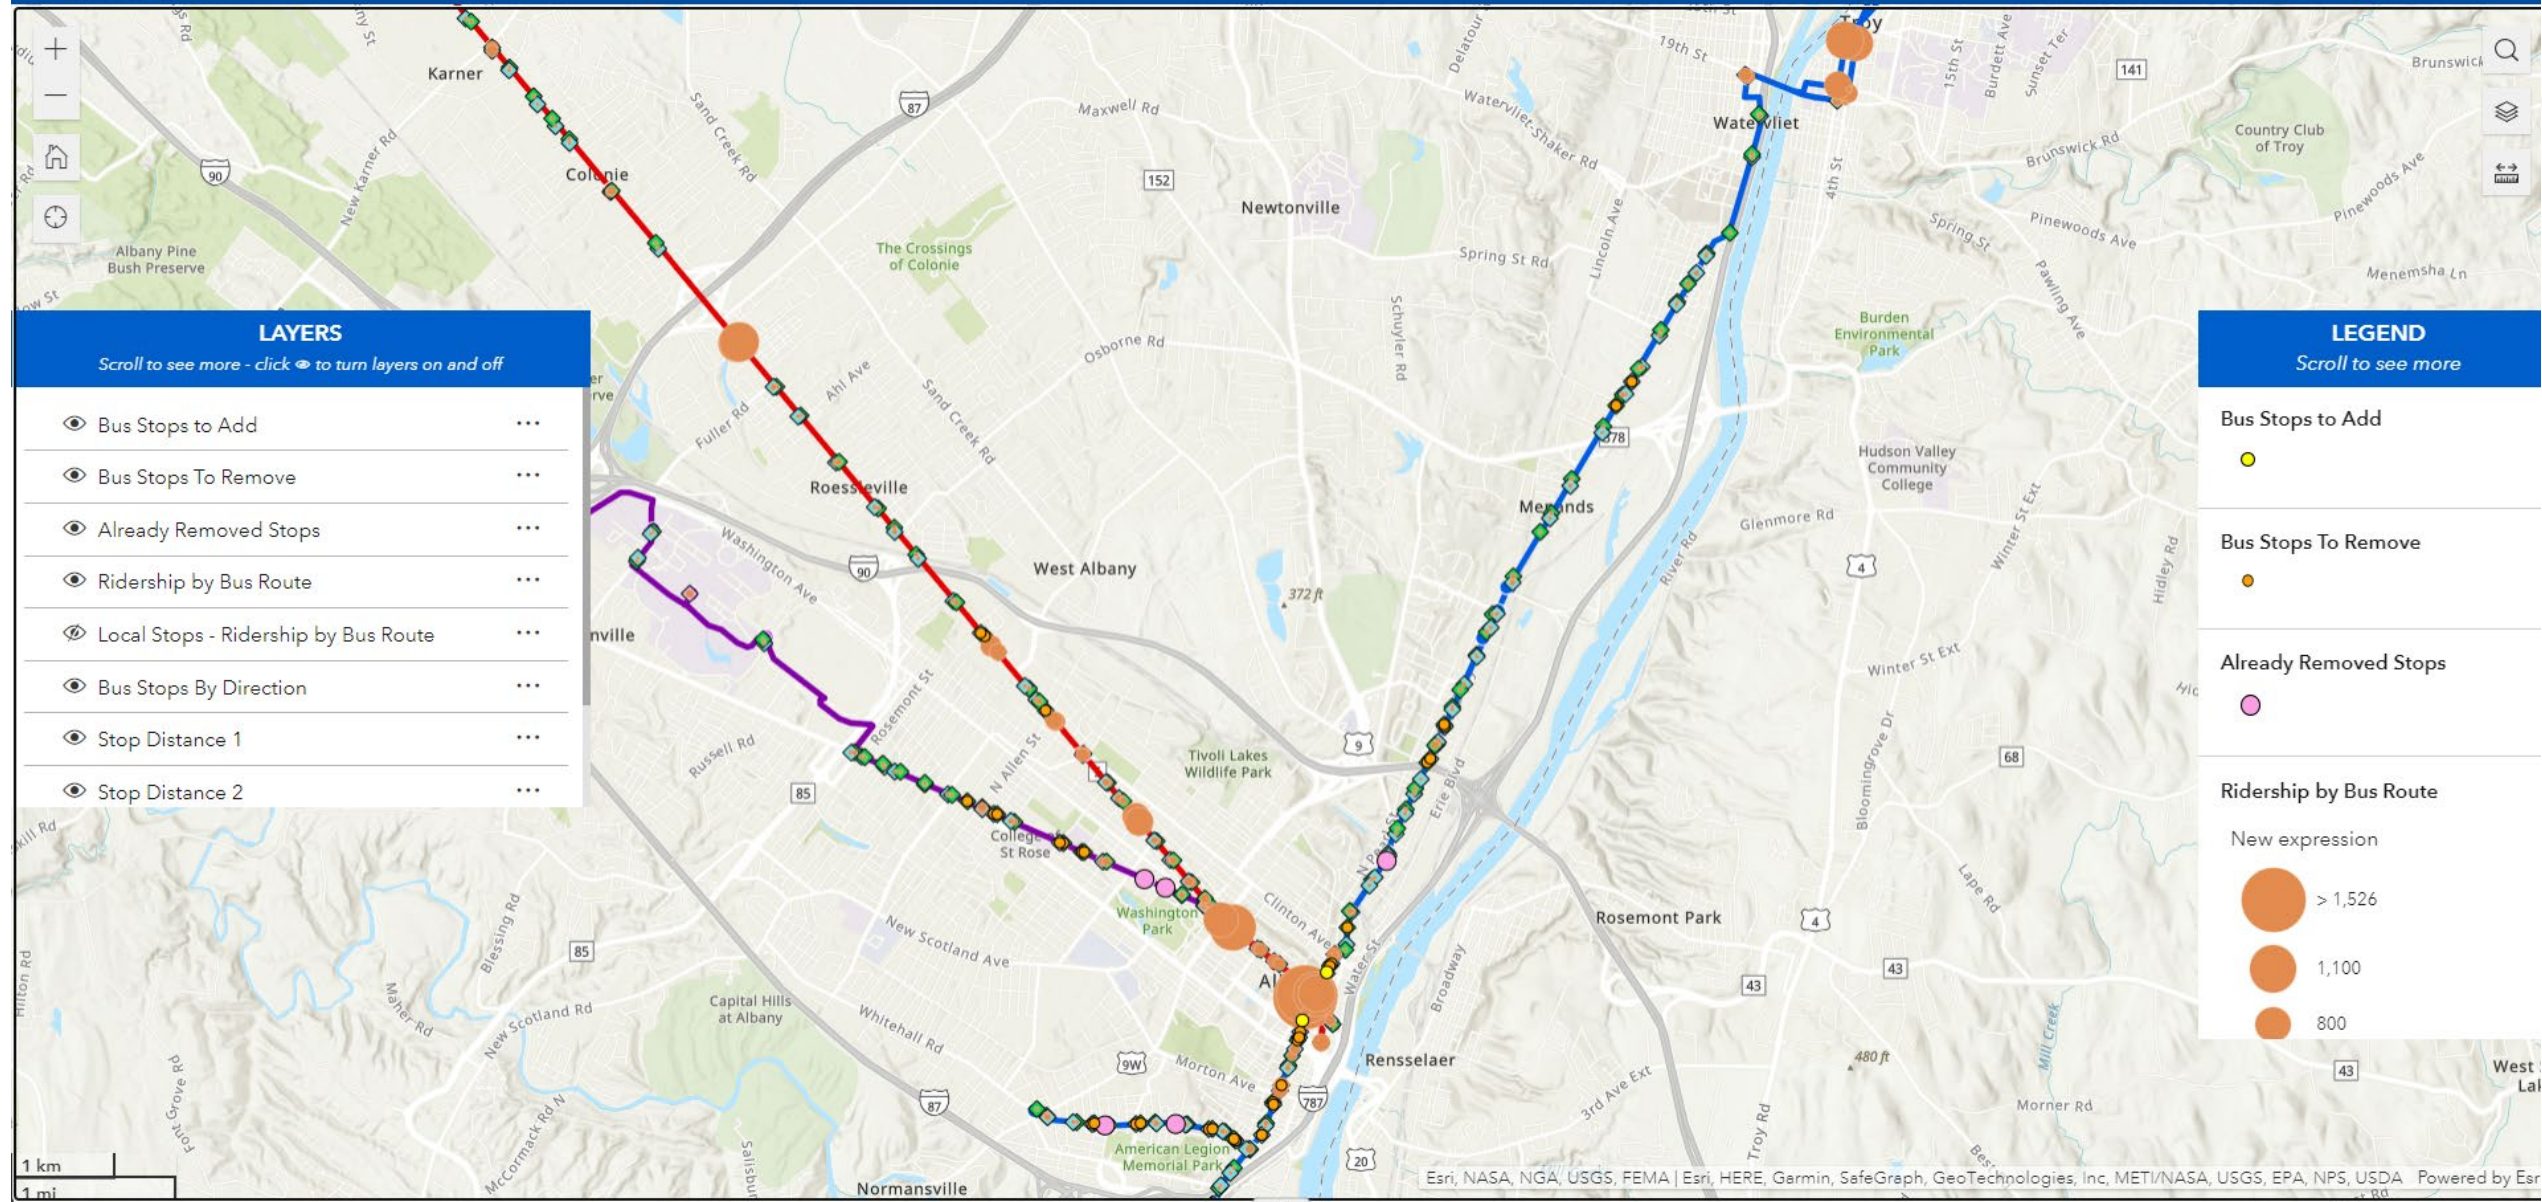

- Confirm stop locations and route info
- Assess pedestrian network
- Identify transit dependent land uses

Findings

- 355 Stops located along BRT corridors
- 60 Stops recommended for removal
 - Some were already inactive due to local service restructure
- Two new stops proposed in Downtown Albany
